foreign agriculture circular

sugar

FS 3-80
NOVEMBER 1980

WORLD SUGAR SUPPLY AND DISTRIBUTION
1955/56-1979/80

This circular supersedes Foreign Agriculture Circular, USDA publication FS 2-79, October 1979. In addition to providing data for 1979/80, statistics are revised for a number of countries. They generally reflect information available in mid-1980; the data for 1979/80 are preliminary and are based on FAS's second (June 1980) estimate of that crop.

The area data in this circular represent area harvested in thousands of hectares. Sugarcane area data for countries producing both centrifugal and noncentrifugal sugar show only the former.

Sugar statistics are on a raw value basis in 1,000 metric tons, except for yield, which is in tons. Three columns for utilization data are not used, but may be used in the future if a breakdown is made for different kinds of utilization.

World production of sugar fell more than 5 percent in 1979/80, to the lowest level since 1975/76. Rising prices brought a reduced rate of consumption, with total consumption estimated to be up less than 1 percent for the year.

The world stock level fell about 20 percent in 1979/80, with year-end stocks of 24.1 million tons representing about 27 percent of annual world requirements.

The supply and distribution statistics are on a crop year basis by country, with the years shown being the ending years. The crop year is generally September-August. Although sugar is one of the most universally produced agricultural commodities, some 36 countries (labeled "other importers") produce virtually no sugar.

(Note: Dashes in the tabular material indicate negligible, zero, or unavailable.)

For further information contact Alvin E. Gilbert, Horticultural and Tropical Products Division, Commodity Programs, FAS/USDA. Telephone (202) 447-2916.
